Tab 1

additional guidance to cohort 4 on automatic ad generation projects

—-

A common pattern: Parents don't say "my student" ("your student" in ad copy), they say "my child".

#1. Corporate/marketing language (not parent language)

Examples: “unlock potential,” “maximize score potential,” “tailored support,” “custom strategies,” “growth areas,” “concrete score gains,” “dream college within reach.”
Parents don’t talk like this.
Replace with plain and direct speech: “raise your child's score”; "tutoring" (instead of "prep" or "support")

#2. Fake urgency + bad cold-fit CTAs
Examples: “spots filling fast,” “limited enrollment,” “secure their spot,” “don’t miss out.”
We want to avoid no fake scarcity. It’s not the real thing that drives action anyway.
Alternate: The calendar has built-in urgency: test dates, college application deadlines, weeks remaining, number of sessions possible.

#3. Lack of mechanism / specific process.
Example: “The digital SAT demands specific strategies...”; "personalized/expert/data-driven" (telling instead of showing)

Alt: [describe specifically how the digital SAT is different: The multi-modal format, where if you score poorly in section 1 it caps your score; Or the built-in calculator + tools that you can use to solve questions in 15 seconds instead of 75 with paper + pencil]

#4. Promise lacks specificity.

"200 points" is what most of our parents want, so we get this directionally correct, but "gain 200 points" is impossible for anyone over 1400, and if you're above 1350 it's probably stretching believability.

The claim can be made more credible with (almost any) conditions:
-16 sessions -> 200 points
-8 sessions + 20min/day practice = 100 points per month
-if your SAT score is between 1100-1300, you can gain 200 points in 16 sessions/in 8 weeks.

—-

Creative Brief — Static AdPersona: The System Optimizer. Corporate father, 48-55. Treats SAT like a business problem. Already knows his kid's target score, the school's median, and the gap. Needs execution not education. Budget is irrelevant. Process rigor is everything.Placement: LinkedIn single-image feed ad, Google Display, retargeting.Objective: Click to book a diagnostic. Not click to learn more. He doesn't need nurturing. He needs a reason to believe the operation is tight.Core Insight: This man buys outcomes with defined inputs. He doesn't want to hear "we help students reach their potential." He wants scope, method, timeline, result. The ad should read like a project summary, not a marketing asset.Concept: "The Gap Report"The ad looks like an internal performance dashboard or a clean consulting deliverable — not a tutoring ad. White or very light background. Clean sans-serif type. No stock photos of smiling teens. No lifestyle imagery. Data only.Visual Layout — Top to Bottom:Header (small, understated, top left) Varsity Tutors logo. Small. Not the hero.Headline (large, bold, centered) "Gap: 190 points. Timeline: 10 weeks. Result: Closed."Body (centered beneath headline, clean two-column layout that reads like a spec sheet)Left column — labeled "INPUT"Starting Score: 1,260Target Score: 1,450+Diagnostic Gaps Identified: 3Sessions Per Week: 2Session Format: 1:1Right column — labeled "OUTPUT"Final Score: 1,470Points Gained: 210Time to Result: 10 weeksPractice Tests Completed: 9Score Trend: Linear improvement weeks 3-10Bottom strip (clean, single line) "Start with a free diagnostic. Know the gap before you spend a dollar."CTA button: "Book Diagnostic" — no "Learn More," no "Get Started." He books or he doesn't.Design DirectionNo gradients. No rounded corners on everything. No tutoring-ad-blue. The palette is white, black, and one accent — either a dark navy or a muted green that reads "on track" like a dashboard indicator. Typography should feel like a financial report or a pitch deck, not an ed-tech landing page. If it looks like it could be a McKinsey one-pager, you're in the right zone. If it looks like it could be on the side of a school bus, start over.No photos of people. No illustrations of students. The absence of imagery is the point. This ad respects his time by giving him only what he needs to make a decision: inputs, outputs, and a clear next step.Variant to Test Against:Same layout. Swap the headline to the ROI frame from your call data:"Princeton Review: $252/hr for group instruction. Varsity Tutors: 1:1 sessions, diagnostic-driven plan, 210-point avg gain. Do the math."This version directly attacks the competitive comparison he's already running in his head. He's pricing alternatives. Hand him the answer.

Tab 2

SAT Messaging Guidance

Messaging Do's & Don'ts

Do	**Don't**
Use the term "Your child"	Use the term "your student" parents think of them as their children not their students
Use the term SAT Tutoring	Use the term SAT Prep
Use avg or typical score gains/improvements	Use a score improvement guarantee
Talk about 100pts/mth if you attend 2X/week 1:1 sessions, 1 weekly practice test, and 20 mins per day of practice problems	Use vague score claims w/ no specificity
Mention that every X points on the SAT is worth on avg Y dollars in scholarship/merit aid	Claim we can help them actually get a scholarship
Compare us to competitors: - Self study (khan academy, SAT prep books, acely, apps) - In Person Learning Centers (mathnasium, sylvan, kumon,etc) - Local Tutors - Expensive Group Classes/Courses (Princeton review, Kaplan) Compare our results to competitors: - 10x the score improvement of self study - 2.6X the score improvement of in person learning centers, local tutors and expensive group courses Compare our value/cost to competitors: - For what princeton review and kaplan charge for gorup courses (1500-2000) we charge for 1:1 - Princeton review/Kaplan charge $199-252/hour for 1:1. We charge as low as 349/mth	
Claim that in person tutoring puts students at a disadvantage, because the SAT is taken on a laptop and needs to be taught and trained on a laptop. Students need 10's of hours of practice in the same digital environment they'll be tested in. Up to 60% of the math section can be solved with built in formulas and	Market to being "online tutoring" - parents wil dismiss us before we can even make the case for why we're better

calculator, but students who aren't trained on it try to do all the math by hand and run out of time	

High Value Personas:

The Athlete-Recruit Gatekeeper

is almost always a mother calling on behalf of her 11th grade student athlete, occasionally a 10th or 12th grader, from a middle to upper-middle-class household, sometimes single-income or military-connected, often in areas with strong athletic programs such as Texas districts like Fort Bend or Lamar CISD or competitive suburban East Coast communities. The student plays a recruitable sport such as football, soccer, crew, golf, or basketball, and the SAT is framed not as a general college admissions metric but as a gating factor for scholarships, NCAA or NAIA eligibility, or coach support. These families value their child's athletic dream and believe hard work on the field should not be undermined by a test score, and their core fear is that the SAT becomes the reason a scholarship opportunity disappears while the recruiting window is still open. They often describe very specific academic gaps, especially in math, such as missing foundational Algebra 2 concepts or struggling with word problems that slow them down, and they may express feeling overwhelmed by trying to manage grades, scores, and recruiting timelines simultaneously. They are typically late funnel and urgency-driven, having already decided that tutoring is necessary and looking for a provider who can move quickly and fit into an intense practice and competition schedule. They respond best to signals that you understand recruiting timelines, can deliver focused 1:1 instruction targeting precise weaknesses, have worked with recruited athletes before, and can match a tutor and schedule a first session within 48 hours, including late evening availability if needed. Common questions revolve around whether meaningful score gains are possible within a tight timeframe, how sessions will fit around sports commitments, whether an online provider is legitimate, and occasionally cost, which is best framed in comparison to potential scholarship dollars. Conversion likelihood is very high because the mother is usually empowered to decide on the spot, urgency is clear, and budget resistance is low, but retention depends heavily on the quality of the first session; these families buy on trust and will quickly advocate or churn based on whether the tutor immediately understands the athletic context, the academic gaps, and the recruiting deadline driving the engagement.

The Proactive Suburban Optimizer

Is typically an upper-middle-class suburban mother calling on behalf of her 11th grader, sometimes a 10th grader, in a dual-income household in an affluent district like suburban Chicago, New Jersey, Charlotte, Cumberland Valley, or similar college-focused Midwestern towns. The student usually has a 3.8+ GPA, is taking AP classes, and is active in extracurriculars, and the family may already have a college advisor or prior experience from an older sibling. These parents value optimization and fairness and want to make sure their child isn't leaving points on the table compared to peers who prepared more thoroughly. They are not

panicked but are motivated by a clear gap: a PSAT or first SAT score in the mid-1200s that doesn't align with the student's classroom performance. Comments like "1260 and she wants a 1450," or "1250 is just not going to cut it," reflect their belief that the student is capable but needs a strategic boost. They are typically mid-funnel, comparison shopping between one or two options, often weighing an in-person provider or an add-on from a current tutor, and convenience can be a deciding factor. They respond best to specificity rather than hype, wanting to hear a clear plan such as a diagnostic test, gap analysis, and a targeted 30–40 hour plan over 8–10 weeks to reach a 1450. They appreciate social proof from similar high-performing districts and families and expect respect for their collaborative decision-making process, often needing to discuss with a spouse before committing. Common objections include wanting to consult their partner, comparing against an in-person option, questioning online effectiveness, or occasionally discussing price, which is best framed as an investment relative to scholarship potential. Overall, this persona has strong conversion potential when both parents are engaged, with the main risk being loss to a local competitor or failure to follow up promptly.

The Immigrant Family Navigator

is typically a first- or second-generation immigrant family, often South Asian, Middle Eastern, or Latin American, with a mother calling about 60% of the time or a student calling as a proxy about 40% of the time. The student is usually in 10th through 12th grade, and the family is often located in suburban areas like Lake Travis or Fort Bend in Texas, Forsyth County in Georgia, Waukegan, Illinois, Norwalk, Connecticut, or similar communities. There are often signals such as accented English, the student translating for a parent, references to educational systems outside the US, and a strong emphasis on education as the primary path to upward mobility. These families deeply value credentials, expertise, and structured guidance, and they tend to approach decisions collectively, with the parent acting as advocate, scheduler, and quality controller. Their fears center on making the wrong choice in an unfamiliar system, wasting money on ineffective tutoring, or falling behind peers whose families better understand US college admissions. Their hopes are clear and often tied to specific professional outcomes like medicine, engineering, or finance. They may describe their challenge as not knowing their child's true SAT level, needing "complete guidance" because everything is new, worrying about timing issues on the test, or expressing concern that online learning won't hold their child accountable. They are usually early to mid-funnel, either navigating test prep for the first time or returning after a disappointing tutoring experience, and they require more education about the SAT itself before they can evaluate providers. They respond best to credibility first, including tutor qualifications and success stories, followed by a clear, step-by-step explanation of the process from diagnostic test to targeted plan to tutor match, along with concrete deliverables like session summaries and progress reports. Reassurance that they are making the right decision by starting now builds trust, as does respect for their family decision-making structure, especially when the father controls finances. Common objections include needing to speak with a spouse, skepticism after a failed tutoring experience, concerns about online focus, confusion about the SAT system, and moderate price sensitivity, which is best framed as an investment in the child's future with possible payment options. Conversion rates are high when the financial decision-maker is directly engaged and much lower when a student is calling alone, making the

key strategy a respectful, patient, slightly formal tone, slower pacing, confirmation of understanding, cultural sensitivity without stereotyping, and a strong close focused on scheduling a callback with all decision-makers present, supported by a written summary that the family can use to finalize their choice.

The Education-First Cultural Investor

is typically a dual-income professional household with notably higher father involvement than most other personas, often with one or both parents holding STEM or technical backgrounds and taking an active role in architecting their child's academic support system. The student is usually in 10th or 11th grade, enrolled in an accelerated track or STEM academy, and the family is commonly located in competitive suburban districts in places like Georgia, Texas, or New Jersey. Education spending is a non-negotiable line item in the household budget, and these families have often already invested in multiple resources such as prep books, online programs, YouTube tutorials, and subject-specific tutors. They value mastery over quick performance gains and believe the right system and expertise can solve almost any academic issue. Their trigger is typically a grade-related concern rather than a test score, such as a drop in AP Physics or AP Calculus, a teacher moving too quickly, or frustration that prior tutoring did not improve performance. They describe problems in detailed, process-oriented ways, pointing to gaps in conceptual understanding, ineffective whiteboard instruction, or prior tutors who failed to move the needle. They are mid-funnel, highly information-driven, and consensus-oriented, often requiring spousal consultation and sometimes a trial before committing. They want to understand tutor credentials, the matching process, and the methodology behind each session, not just promised score improvements. They respond well to explanations of how a session is structured, how progress is tracked, and how tutoring can consolidate multiple supports under one coordinated plan, potentially replacing several separate providers. They appreciate acknowledgment of their existing investment in tools like Princeton Review or Khan Academy and want reassurance that tutoring will build on that foundation rather than restart from scratch. Common objections include needing to consult a spouse, already having a tutor in place, wanting proof of tutor quality, or requesting a trial session, all of which are genuine process steps rather than stalls. Conversion often requires multiple touchpoints, but once committed, these families tend to be loyal, expand into additional subjects, and refer peers, making them high lifetime value customers. The most effective approach is professional, knowledgeable, and peer-level in tone, allowing space for detailed questions, demonstrating subject-matter awareness, and closing on a structured follow-up that includes tutor profiles, pricing options, and a sample study plan for family review.

The System Optimizer

is typically a dual-income professional household with a father calling more than 75% of the time, often in tech-centric regions like the Atlanta metro area, Austin, or the Bay Area, and frequently leveraging employer-sponsored benefits such as Bright Horizons or corporate education stipends. The student is usually in 10th through 12th grade, and the parent approaches tutoring as a procurement decision rather than an emotional one. These families

value efficiency, process optimization, measurable outcomes, and self-service tools, and they are motivated by practical triggers such as an approaching SAT date, an expiring employer benefit, or frustration with a previously cumbersome setup process. Their concerns are rarely expressed emotionally; instead, they focus on logistics, asking how quickly tutoring can begin, how scheduling and rescheduling work, how progress is measured, and how benefits are applied. They are late funnel and execution-focused, having already decided that tutoring is necessary, and are evaluating providers primarily on operational quality rather than instructional philosophy. They respond best to clear assurances of speed, such as tutor matching within 24 hours and a first session scheduled within the week, seamless benefit integration with step-by-step guidance, transparent competitive comparisons emphasizing 1:1 instruction and platform flexibility, and concrete reporting such as periodic progress updates with score projections. Common objections revolve around benefit mechanics, prior friction in the setup process, online scheduling capabilities, and differentiation from competitors, all of which require crisp, direct answers rather than persuasive selling. Conversion likelihood is high when the process is smooth, but this persona will quickly disengage if enrollment feels clunky, scheduling is slow, or instructions are unclear. The most effective approach is professional, efficient, and no-nonsense in tone, moving quickly to facilitate setup, closing directly by offering to complete enrollment in minutes, and following through with automated onboarding that minimizes ongoing parental management while delivering measurable results.

The Neurodivergent Advocate

is almost always a mother calling about a 9th through 12th grade student with a diagnosed or suspected learning difference such as ADHD, autism spectrum disorder, dyslexia, dyscalculia, or a processing disorder, and she typically has deep knowledge of her child's diagnosis, accommodations, and learning profile. These families are often middle to upper-middle class and may already be investing in therapies, accommodations, or specialized supports, and while there is no strong geographic concentration, they frequently appear in affluent suburban districts. The parent often provides extensive context about the child's history before asking about tutoring, mentioning extended time, separate testing rooms, therapeutic activities, anxiety around testing, or prior tutoring experiences that failed because the instructor could not adapt. She values the right fit over the lowest price and wants her child to be seen as capable rather than broken, and her greatest fears are that a tutor will treat her child like a typical learner, damage their confidence, or waste precious time during a critical academic window. The trigger is often an approaching test date combined with the realization that standard prep will not work, a sudden interest in college from the child that creates urgency, or disappointment from a previous tutoring experience that lacked flexibility. She is mid-funnel and evaluating whether the provider can truly accommodate her child's needs, not whether tutoring in general is worthwhile. She needs to hear clear acknowledgment of the specific diagnosis, honesty about tutor experience with similar students, a detailed explanation of the matching process, and reassurance that switching tutors is easy if the fit is not right. She also responds strongly to accommodation awareness, such as building extended time into practice sessions, structuring sessions predictably for students on the spectrum, reducing pressure early to build confidence, and explaining how one-to-one online instruction can actually benefit students with attention

challenges. Common questions focus on tutor experience with specific diagnoses, whether online learning will work for their child, how anxiety will be handled, and cost, which is best framed as part of the broader support ecosystem already in place. Conversion likelihood is high when the representative listens fully, responds with warmth and specificity, avoids generic promises, and follows up in writing with tutor profiles, an accommodation plan, and session structure. A personal check-in after the first session significantly increases loyalty, as this parent measures success not just by score improvement but by whether her child feels understood, supported, and capable

The Burned Returner

is most often a mother calling about an 11th or 12th grade student after a prior negative tutoring experience, either with VT or another provider, and the defining characteristic is not geography or income level but disappointment. She may reference a specific tutor by name, describe grades declining during tutoring, or use emotionally charged language like “burned,” “wasted,” or “disappointed,” and she often sets explicit conditions for returning, such as requesting a particular tutor or format. This parent values accountability, professionalism, and real results, and sees tutoring as a sacred contract that was previously broken. Her core fear is being burned again, wasting more time and money, and further damaging her child’s confidence during a critical academic window, while her hope is to finally find the one tutor who truly understands her child and can reverse the trajectory. She is typically late funnel but conditional, not browsing but returning out of urgency due to a new academic crisis such as a dropping grade or approaching test date, and she will only move forward if specific requirements are met. She articulates clearly what went wrong before, often pointing to ineffective lessons, lack of measurable improvement, or directionless practice, and she may test the representative’s response to criticism to gauge whether the company is defensive or accountable. What she needs first is acknowledgment and ownership of the past failure, without excuses, followed by a concrete explanation of what will be different this time, including a transparent tutor matching process, clear credentials and specialization details, a defined quality check after the first session, and an explicit ability to switch tutors immediately if expectations are not met. Common objections center on the prior bad tutor experience, requests for a specific tutor, preference for in-person only, and skepticism about whether the same problems will recur, all of which require listening fully, validating the frustration, and offering specific procedural safeguards rather than vague reassurances. Conversion likelihood is moderate and highly dependent on whether trust can be rebuilt in a single conversation; when the right tutor and format are available and the rep demonstrates empathy, accountability, and a clear remediation plan, this persona can convert and become loyal, but if their conditions cannot be met or the response feels dismissive, they will walk away permanently.

Cold Audience Hooks by Persona

ATHLETE FAMILIES (High urgency, late funnel)

Psychology: Fear of missed window + urgency + identity (athlete dream)

1. “The coach wants him. The admissions office needs an SAT score.”
2. “If the SAT is the only thing between your athlete and a scholarship… don’t wait.”
3. “Recruiting windows don’t care about SAT score excuses.”
4. “Air Force hasn’t called yet? It might not be the sport.”
5. “He’s putting in the work on the field. Is his SAT score keeping up?”
6. “Don’t let a low SAT score be the reason the NCAA scholarship disappears.”
7. “Practice ends at 7. SAT tutoring starts at 9:30. SAT around your schedule. No commute.”
8. “The recruiting clock is ticking. Is his SAT ready?”

These should go straight into a form that says:
“Talk to an SAT specialist today. We’ll call you in 60 seconds.”

PROACTIVE SUBURBAN OPTIMIZER (Mid-funnel, GPA mismatch)

Psychology: Control, optimization, fairness

1. “3.8 GPA. 1260 SAT. Something’s off.”
2. “Straight A’s. Disappointing SAT score. Sound familiar?”
3. “If she’s capable of a 1450, why is she stuck in the 1200s?”
4. “Your GPA says one thing. Your SAT says another.”
5. “Smart kids underestimate the SAT. That’s why scores stall.”
6. “Most mid-1200s students are 3–4 fixes away from a 1400+.”
7. “Stop studying everything. Start studying what actually moves points.”
8. “Before you choose a local prep center, read this.”
9. School doesn’t prepare smart kids for the SAT, and neither does generic SAT Prep.

CTA psychology here:
👉 “See what score range is realistic in 8–10 weeks.”

SCHOLARSHIP / FINANCIAL FAMILIES

Psychology: SAT = money lever

1. “A 100-point SAT increase can mean $10,000–$40,000 in scholarships.”

2. “The SAT isn’t just a test. It’s a tuition discount.”
3. “Every SAT point has a dollar value.”
4. “If college cost worries you, start with the SAT.”
5. “A higher score changes what you pay for college.”
6. “Don’t leave scholarship money on the table.”
7. “Your child’s score determines how much you write in tuition checks.”

Form framing:
👉 “See how many scholarship dollars your score could unlock.”

KHAN ACADEMY FAILURES (Huge segment)

Psychology: Frustration + validation + “it’s not your fault”

1. “Khan Academy raised her score 10 points. That was the problem.”
2. “Watching videos on Khan isn’t the same as learning to test well on the SAT.”
3. “Free SAT prep is great… until you get your score back.”
4. “If you’ve been ‘studying’ but your score hasn’t moved… read this.”
5. “Looking at questions on a screen isn’t the same as someone explaining them.”
6. “Most self-study fails for one reason: no accountability.”
7. “If your child won’t sit down and study, this fixes that.”

CTA:
👉 “See what 1-on-1 changes.”

ONLINE SKEPTIC REFRAME (Critical for Meta)

You don’t defend online.You flip it.

1. “The SAT is digital now. Why prep on paper?”
2. “You wouldn’t practice football on a baseball field.”
3. “Training for a digital test in a classroom is the real risk.”
4. “Your child will take the SAT on a laptop. That’s how we train.”
5. “Online isn’t the issue. Group Zoom and pre recorded classes are.”
6. “This isn’t a class. It’s one tutor focused entirely on your child.”
7. Generic SAT prep that goes over all the content does more harm than good. You need a diagnostic and to focus on the question your kid gets wrong.

URGENCY / BAD SCORE JUST HIT

Psychology: Emotional spike

1. “Not the score you expected?”
2. “She got the exact same score again. Now what?”
3. “1250 isn’t going to cut it.”
4. “If your child cried after their PSAT…”
5. “Same score twice? That’s fixable.”
6. “Your SAT is in 6 weeks. Here’s what’s still possible.”

CTA:
👉 “Talk to an SAT specialist today.”

IMMIGRANT FAMILY / "I DON'T KNOW WHERE TO START"

Psychology: Overwhelm + unfamiliar system + fear of making the wrong choice

1. "The SAT process is confusing. We walk you through all of it."
2. "You don't need to understand the SAT. That's our job."
3. "First time dealing with the SAT? Here's everything you need to know."
4. "Not sure where your child stands on the SAT? That's the first thing we figure out."
5. "I woke up with a pit in my stomach. I don't even know where to begin."
6. "If no one explained the SAT to you, don't worry — we will."
7. "Your child deserves the same shot as kids whose parents grew up with this system."
8. "New to the US college process? We guide you through the SAT, the scores, and what they mean for admissions."

CTA: "Talk to an SAT specialist who will walk you through it step by step."

NEURODIVERGENT / LEARNING DIFFERENCES

Psychology: Protective + "my child learns differently" + fear of being misunderstood

1. "Standard SAT prep doesn't work for every kid. We know that."
2. "ADHD doesn't mean they can't score high. It means they need the right tutor."
3. "She has extended time. Now she needs a tutor who knows what to do with it."
4. "Your child isn't broken. They just learn differently. We match tutors who get that."
5. "If your child's SAT prep needs to look different, it should."
6. "Most tutors teach content. Ours teach your child — the way they actually learn."
7. "Dyslexia, ADHD, processing differences — we've worked with all of it."
8. "The right tutor doesn't just know the SAT. They know how your child thinks."

CTA: "Tell us about your child. We'll match them with a tutor who understands how they learn."

TEST ANXIETY

Psychology: Fear + identity ("I'm not a good test taker") + confidence

1. "She knows the material. She freezes on the test."
2. "Good grades, bad test scores. That's not a knowledge problem."
3. "'I'm just not a good test taker' — that's fixable."
4. "She's scared to take the SAT. We fix that before test day."
5. "Test anxiety isn't about being smart enough. It's about being prepared enough."
6. "If your child studies hard but chokes on test day, this is for them."
7. "The SAT shouldn't feel like a surprise. By test day, your child has already done this six times."
8. "Nervous about the SAT? By test day, nothing on that screen will be unfamiliar."

CTA: "See how we help students walk into the SAT feeling ready, not scared."

ACCOUNTABILITY / "I CAN'T MAKE MY KID STUDY"

Psychology: Parental exhaustion + need for external authority

1. "Tired of being the homework police? That's what the tutor is for."
2. "You shouldn't have to threaten your teenager to sit down and study."
3. "If your child won't study unless someone makes them — we make them."
4. "A 16-year-old won't listen to Mom. They'll listen to their tutor."
5. "We keep them on track so you don't have to fight about it."
6. "Progress reports every week. You'll know if they're doing the work."
7. "You have your own career to deal with. Let us handle the SAT."
8. "We don't just teach your child. We hold them accountable."
9. "She knows she won't stay on it by herself. That's why she needs someone in her corner."

CTA: "Get a tutor who keeps your child accountable — so you don't have to."

SCHOOL FAILED THEM

Psychology: Frustration + betrayal + "I'm paying for school and they're not teaching"

1. "Their school gave them a book. That's not SAT prep."
2. "The SAT prep class at school was just watching videos. Sound familiar?"
3. "If the school's SAT prep was working, you wouldn't be here."
4. "A substitute teacher showed YouTube videos in AP math. And now there's the SAT."
5. "When the school can't get your child ready, we step in."
6. "They didn't have a real math teacher for half the year. Now they have the SAT in 6 weeks."
7. "The school's SAT class and the actual SAT are two different things."
8. "Your child's school prepared them for school. We prepare them for the SAT."

CTA: "See what real SAT prep looks like."

EDUCATION-FIRST CULTURAL INVESTOR

Psychology: Process-oriented + already investing + wants to consolidate and optimize

1. "Already tried Khan Academy, prep books, and a tutor — and the score hasn't moved?"
2. "You've invested in every resource. Now invest in the one that actually works."
3. "Three apps, two tutors, and a prep book. Still stuck? There's a reason."
4. "You don't need more tools. You need one plan that ties everything together."
5. "If your child is in AP classes and still struggling on the SAT, the problem isn't effort."
6. "Smart families try everything. The smartest ones stop trying everything and get a plan."

CTA: "See how we replace five tools with one system that actually raises scores."

PARENT-CHILD RELATIONSHIP

Psychology: Tension + "I can't help them anymore" + preserving the relationship

1. "She doesn't want your help with math anymore. That's normal."
2. "Stop fighting about homework. Start celebrating progress."
3. "You were good at math. She gets frustrated when you try to help. Sound familiar?"
4. "A tutor isn't just an expert. It's someone your child will actually listen to."
5. "The SAT shouldn't be the thing you fight about at dinner."
6. "Let someone else be the bad guy about studying. You be the parent."

CTA: "Give your child an expert they'll actually listen to."

SIBLING / SECOND CHILD

Psychology: Learned from the first time + don't want to repeat mistakes

1. "Her older sister didn't prep. It cost her her goals. Don't let it happen twice."
2. "You already watched one child go through this. This time you know what to do."
3. "Second child taking the SAT? You already know free resources don't cut it."
4. "Her sister scored 1270. She wants 1400. Different child, different plan."

CTA: "Let's build the plan that works for this child."

BURNED RETURNER / "TRIED TUTORING, IT DIDN'T WORK"

Psychology: Trust deficit + urgency + conditional willingness

1. "Tutoring didn't work last time? That's why you're here."
2. "You already spent the money. The score didn't move. We hear you."
3. "Bad tutor experience? Here's what we do differently."
4. "Wasted $100/hr on a tutor who didn't move the needle? You're not alone."
5. "If you've been burned by SAT prep before, read this before trying again."
6. "Last tutor couldn't explain why the rule works? Ours can."
7. "Paid for tutoring and got the same score? That's not your child's fault."
8. "We match, we measure, and if it's not working we change course. That's the difference."

CTA: "Tell us what went wrong. We'll show you what's different."

How I'd Structure This on Meta

Because you're calling in 60 seconds, your best ads will:

Hook (1 sentence)
↓
Short pattern interrupt explanation (2–3 lines max)
↓

Varsity Tutors SAT — Offer Positioning & Messaging

Universal offer positioning for sales calls, landing pages, emails, ad copy, and internal training. This is how we position the core offer so that the membership makes sense, online makes sense, monthly makes sense, no rollover makes sense, and our features are positioned as real differentiators — before objections ever come up. Pull from any section.

The Problem We Solve

Your child has a good GPA. They're a smart kid — AP classes, extracurriculars, strong grades. But their SAT score doesn't reflect that. Maybe they got a PSAT score back that was lower than expected. Maybe they took a practice test and the number didn't match who they are in the classroom. Maybe they already took the SAT once without much prep and the score just isn't going to cut it for the schools they're looking at.

And now you're worried. You feel like you may have waited too long to get started. Your child is busy — AP classes, sports, a social life — and it's hard to know if they're putting in enough time. You tried free resources like Khan Academy or a prep book, and the score barely moved. Maybe you had a tutor before and it didn't work out. Maybe the school offered a prep class but all they did was hand out a book and watch videos.

Meanwhile, the stakes are real. Their target school's admissions requirements aren't negotiable. Scholarship eligibility is tied directly to their score. Every point matters — not just for where they get in, but for how much you pay for the next four years. And the test date is coming up.

You need something that actually works, that fits into their schedule, and that you can trust is moving the needle — because you can't afford to waste time or money on something that doesn't.

What We Deliver

We get your child's SAT score up — and you'll see it happening week by week.

Our students raise their scores **10X more than students who self-study** and **2.6X more than students in group classes, local tutoring centers, and brand-name programs** like Princeton Review, Kaplan, Sylvan, Kumon, and Mathnasium. At 2 sessions per week with 20 minutes of daily practice, most students see their score **go up ~100 points per month**.

Every week, you'll know exactly where your child stands — what they've been working on, what they're getting better at, what they still need help with, and what they'd likely score if they took the SAT today. You'll never have to wonder if the tutoring is working. You'll see it in the numbers.

And we don't stop at a test score. We want to help your child get into the best schools they can and land as much scholarship money as they can. Once their scores are in, we even help them write their college essays.

Your Tutor

You'll be paired with a **tutor who really knows the SAT** — not just someone who's "good at math" or "does test prep." Every tutor on our platform has been thoroughly vetted:

- **They scored high on their own SAT** — they've been through it themselves and know the test inside and out
- **They went to a top 100 university** — we've verified their transcripts and grades
- **They passed a rigorous background check, education check, and teaching check** — we don't just check credentials, we make sure they actually know how to teach, how to explain things in a way that clicks for students, and how to run a productive tutoring session
- **They know the Digital SAT specifically** — not just "test prep" in general, but the current format, the question types, and how it's scored

We keep your child's tutor reserved with slots open specifically for them. The better your child and their tutor know each other, the better the results — so we protect that relationship. Your child isn't getting a random tutor every session. They're getting *their* tutor.

What Our Offer Is

We offer a **monthly SAT tutoring membership** — not a course, not a group class, and not a self-study app.

A course gives you a fixed syllabus, a room full of other students, and an end date that doesn't care what you scored. A self-study app gives you a screen full of practice problems and no one to explain what you're getting wrong or why. Neither of them adapts to your child. Neither of them can figure out what your child is actually struggling with and focus on that. Neither of them sticks around until the job is done.

Our membership gives your child a package of 1-on-1 tutoring hours each month with a tutor who knows the SAT and knows your child, plus a full diagnostic and practice platform, and a study plan built specifically for them — all designed to get their score up as fast as possible. It's an ongoing program that stays with your child until they've hit their goals — whether that's a target score, getting into their top schools, or landing scholarships.

What's Included in the Membership

1-on-1 Expert Tutoring Sessions

The core of the program. Your child meets with their tutor for live 1-on-1 sessions each week. This is where things click — where a tutor can see that your child understands the concept but keeps running out of time, or that they're making the same mistake on a certain type of question, or that they know the math but freeze up under test conditions. A great tutor who knows your child can spot these things and fix them in real time. That doesn't happen in a classroom, and it doesn't happen with an app.

SAT Math & SAT Reading/Writing Diagnostics

A lot of parents tell us: "I don't know where my child stands" or "she has a good GPA but I don't understand why her test score is so low." That's exactly what the diagnostic figures out. Before we start, your child takes assessments in both SAT Math and SAT Reading/Writing. These tell us exactly what types of questions they're getting wrong, whether it's a content issue or a pacing issue or a test-taking issue, and where the fastest path to raising their score is. We don't guess — we test, we see the data, and then we build the plan around what your child specifically needs.

Personalized SAT Study Plan

Once we know what your child needs to work on, we build a study plan around them — not a generic syllabus that every student gets. It's a week-by-week plan that focuses on the specific topics and question types where your child has the most room to bring their score up. If they're solid on math but struggling with the reading section, we spend their time on reading. If they know the content but can't finish in time, we work on pacing. The plan is built for your child, and it changes as they improve. This is what holds your child accountable. We don't just give them content or lessons, we hold them accountable to put in the work it takes to see results. And we will report back to you their progress and task completion each week so you'll know if they're on track or off track.

Training on the Real Digital SAT Interface

You may not know this, but the SAT is now 100% digital. Unlike in the past when it was taken with pen and paper, it's now taken on a laptop in a Digital SAT interface. The platform our tutors use mirrors the same interface your child will face on the day of the test — same layout, same tools, same experience. So when test day comes, nothing looks unfamiliar.

But here's the part most families don't realize: the SAT interface has **built-in tools — formulas, a calculator, and reference sheets** — that the test is actually designed for students to use. The SAT expects your child to know those tools are there and to use them to work faster. Most students don't even know they exist.

This matters because **over 60% of SAT test takers run out of time on each section.** Pacing is one of the biggest reasons students score lower than they should — they know the material but can't finish. Our tutors teach your child how to identify when to use the built-in tools, which tool to use for which type of problem, and how to get to the correct answer quickly with less manual work. Instead of doing every calculation by hand and running out of time, your child learns to use what the test already gives them.

This is especially impactful on the math section, where students struggle the most. Just learning how to use the interface and the built-in tools effectively — without changing anything else about what your child knows — can result in 100+ point gains on its own.

6 Full-Length Digital SAT Practice Tests

Full-length practice tests under real conditions. These show us — and you — exactly where your child's score is right now, what they still need to work on, and how they handle the full length and pressure of the real test. By the time test day comes, they've already done this six times. No surprises.

20,000+ Bluebook-Identical Practice Questions

Unlimited practice material modeled on the actual Digital SAT. Your child will never run out of problems to work on between sessions.

Weekly Progress Reports & Score Tracking

You'll see your child's score going up — and you'll see it every week, not just at the end. Every week, you get a progress report showing exactly where your child stands: what they've been working on, what they're getting better at, what they still need help with, and what they'd likely score if they took the SAT today. You're never in the dark. You never have to ask "is this working?" — the numbers show you.

This is one of the biggest differences between us and every other option. A Kaplan class doesn't tell you how your child specifically is doing — they tell you the class covered Chapter 7 this week. A self-study app doesn't flag that your child keeps getting the same type of algebra question wrong. A local tutor might give you a vague "she's doing great" after each session. We tell you: here's what your child would score today, here's what they need to work on next, and here's what we're doing about it. If something isn't clicking, we catch it early and adjust — not at the end of a 10-week course when it's too late.

Perfect Tutor Match Guarantee

If your tutor isn't the right fit, we rematch you immediately. No awkward conversations, no starting over from scratch.

Flexible Rescheduling & 24/7 Instant Tutors

Life happens. You have flexible rescheduling for your regular sessions. And if you need extra help outside your normal schedule — the late after practice or work, over a weekend, whenever — instant tutors are available 24/7 for one-off sessions.

College Essay Support

Once your child has their score, we help them write their college essays. We're not done when the test is done — we're done when they're accepted.

Our Results vs. the Competition

Our students raise their scores **10X more than students who self-study** and **2.6X more than students in local tutoring, group prep classes, and even brand-name programs** like Princeton Review, Kaplan, Sylvan, Kumon, and Mathnasium. That's not a small difference — it's the difference between a safety school and a reach school, between no scholarship and a full ride.

vs. Self-Study Apps & Books (Khan Academy, prep books, apps)

Self-study apps are cheap — many are $49 or $99/month — but they don't actually get scores up. Students don't know what to focus on, can't figure out on their own what they're getting wrong or why, and there's no one keeping them on track. Our students raise their scores 10X more because they have a real person identifying exactly what they need to work on and making sure they actually do it.

vs. Self-Paced Online Courses

Self-paced courses regularly sell for $599–$999. You get pre-recorded videos and a set of practice problems. There's no live instruction, no one figuring out what your child specifically is struggling with, and no one making sure they keep at it. If your child gets stuck, they're stuck.

vs. Princeton Review & Kaplan Group Classes

Princeton Review and Kaplan charge **$1,500–$2,500** for their group classes, which are taught over Zoom with a room full of other students. Your child moves at the pace of the class, not their own pace. If they need 1:1 sessions, that's an **upcharge of $199–$252 per hour** on top of the course price. Our students raise their scores 2.6X more than students in those programs, and our 1:1 sessions are included — not an add-on.

vs. Local Tutors (Sylvan, Kumon, Mathnasium, independent tutors)

Local tutoring centers and independent tutors charge $80–$200/hour with no platform, no way to figure out what your child specifically needs, no practice tests, and no real plan. You're paying for a person in a room. If it's not a good fit, you start over. Our students raise their scores 2.6X more because our tutors are specifically vetted for the Digital SAT, backed by a full platform, and working from a plan built around your child — not winging it.

Pricing: The Most Competitive Offer on the Market

Here's what SAT prep actually costs across the market:

Option	What You Get	Price
Self-study apps (Khan Academy, etc.)	Practice problems, no live instruction	$0–$99/mo

Self-paced courses	Pre-recorded videos, no live instruction	$599–$999 one-time
Princeton Review / Kaplan group class	Group Zoom class, 1:1 is extra	$1,500–$2,500 + $199–$252/hr for 1:1
Local tutor / tutoring center	1 person, no platform	$80–$200/hr
Varsity Tutors	1:1 expert + full platform + study plan + diagnostics + practice tests	$349–$1,099/mo

Our plans start at **$349/month** and go up to **$1,099/month** depending on how many hours of 1:1 sessions per week you want.

We usually recommend starting with 2 sessions per week, which is $639/month. That gives your child:

- 2 hour-long 1:1 sessions per week with their tutor
- 1 full-length Digital SAT practice test per week
- A study plan built for them with daily assigned lessons and practice problems

If your child completes their assigned lessons and practice problems for 20 minutes per day on top of their 1:1 sessions, that combination typically gets their score up **~100 points per month**.

From a pure pricing standpoint, we're the most competitive offer on the market for what you're getting. The apps are cheaper but don't actually get scores up. The courses are a one-time fee but there's no live instruction. Princeton Review and Kaplan charge more for group classes and then charge $199–$252/hr extra if you want any 1:1 time. We include 1:1 sessions, a full platform, diagnostics, practice tests, and a study plan built for your child — all in one monthly membership.

Why Online Is Better Than In-Person

In-person tutoring sounds better. It isn't. Here's why:

Access to the best tutors, not just the closest ones. In-person limits you to whoever lives near you. Online opens up the entire country. Your child gets matched to the best SAT expert for their specific needs, not whoever happens to be within driving distance.

No commute, no wasted time. An hour of tutoring shouldn't cost two hours of your evening. Students log on from home, from the library, from wherever they're comfortable. More time studying, less time in the car.

Consistent scheduling. In-person sessions are fragile — traffic, weather, illness, conflicts. Online sessions happen. Showing up consistently is the single biggest thing that gets scores up, and online makes it easy to show up every week.

The Digital SAT is taken on a computer. The test itself is digital now. Practicing with a tutor in a digital environment mirrors the actual test experience. Sitting in a room with a whiteboard doesn't.

Why We Don't Sell You a Fixed Number of Sessions

Every child is different. Some students know the material but need help with pacing, test-taking strategy, or reducing test anxiety. Others need several sessions to learn a concept and then more sessions to reinforce it until it sticks. Some are strong in math and need all their time on reading comprehension. Others are the opposite. Some pick things up in one session. Others need three.

We don't know in advance whether your child needs 8 sessions or 16 sessions or 20 sessions to hit their goal. And we're not going to sell you something that we aren't sure can get them results. That's why we don't package it as "buy 20 hours and hope for the best."

With a membership, plus our weekly progress reports, we always know how your child is doing — what they'd likely score today, what they're still getting wrong, and what to work on next. We can add more sessions, shift what we're covering, or add practice tests as we go. We're testing your child on the same types of questions that show up on the real SAT, so when we tell you where they stand, it's based on real data — not a guess.

This is what makes us faster than the alternatives. Instead of 8, 10, or 12 weeks of generic prep to move the needle 50 points, our students typically see their score go up ~100 points per month — because every session is focused on the specific things that will raise your child's score the fastest. It's the fact that everything is built around your child — and that we're constantly checking what's working and what's not — that lets us move this fast and tell you exactly where they stand at any point.

Why It's a Monthly Membership (Not a Block of Hours)

Why monthly?

There's no way to know in advance exactly when your child will hit their academic goals — or whether new goals will emerge along the way. Instead of selling you a finite set of hours and hoping it's enough, your hours auto-renew each month until you cancel. You can cancel anytime.

We've found that having it monthly encourages families to take full advantage. Tutoring doesn't work unless you show up. So we structure the program to get you to use all of your hours each month — not bank them, not push them off, not cram them in at the end. Showing up

consistently every week is what gets scores up, and the monthly model keeps that rhythm going.

How billing works

You're billed today for your first month of tutoring hours. You have 30 days to use them. On day 30, your membership auto-renews for the next month. This continues until you cancel, which you can do at any time. If for some reason you aren't able to use all your sessions in the first 30 days let us know and we can extend them for you for an additional without any hassle. However, tutoring doesn't work as well if your sessions are infrequent or you move/change cancel them, the more consistent you are the better results you'll get. So try your best to complete your weekly sessions.

Why not sell a big package of hours up front?

When families buy 20 or 40 hours in a lump sum, two things happen: they procrastinate on scheduling ("we have plenty of time"), and they try to cram sessions into the final weeks before the test. That's the opposite of what actually gets scores up. Cramming doesn't stick. Consistent work over time does. Monthly billing keeps the urgency real — these are your hours for this month, use them this month.

What if something comes up?

Life happens — sickness, vacation, a busy week. If you're ever unable to use your sessions, give us a call and we'll work it out. We have flexible rescheduling for your regular sessions, and instant tutors available 24/7 for one-off sessions when you need to make up time or get extra help before a test.

What Matters Most: Current Score, Target Score, and Timeline

What matters most is three things: your child's **current score**, their **target score**, and their **timeline** (when is their next test date and how many times do they plan to take it).

Here's a rough guide:

- **Starting at 1200, targeting 1400+** → Plan for **2 months of prep minimum**
- **Starting at 1050, targeting 1400+** → Plan for **3–4 months of prep**
- **Starting lower or targeting higher** → We'll map out a custom timeline based on diagnostics

We can get anyone's score up on the SAT. It's a matter of time and effort. The diagnostic tells us what your child needs to work on, the study plan lays out how to get there, and the 1:1 sessions make sure it actually happens.

At 2 sessions per week with 20 minutes of daily practice, most students see their score **go up ~100 points per month**. So the math is straightforward: how far does your child need to go, and how much time do you have?

Super Score Strategy

Most families plan to take the SAT once, and we'll absolutely support you in getting your child's score as high as possible between now and their next test day. But you should know about super scoring.

Super scoring is where your child takes the SAT more than once — for example, once focusing on Reading/Writing and once focusing on Math — and colleges allow you to combine the best score from each section across sittings. This can result in a composite score higher than any single sitting.

The students who score 1400+ typically take the SAT **3 times on average**. We can help you plan a super score strategy if that's the right path, or we can go all-in on a single test date. Either way, we'll be here.

If your child takes the test and decides they want to keep going — push for an even higher score, try a super score approach, or take another shot — you don't need to buy a new package or re-enroll. Your membership just continues into the next month, with the same tutor, the same study plan, and all your progress intact.

We're in It for the Long Haul

We don't know how long it'll take — and that's the point. This isn't a 6-week course with a fixed end date. We stick with you.

Here's what actually happens: a family decides to target a 200-point improvement. Their child hits it. And then they realize — they still have time before applications are due. They could take the SAT one more time. And if they do, they might score high enough to get into a completely different tier of colleges, or significantly increase their chances of not just getting into their top schools but also landing scholarship offers of $20,000 or $40,000+. So one more month — $600 worth of tutoring — has an enormous ROI. And they decide to go for it.

This happens all the time. New goals emerge. Students realize they can push well beyond their original target. Parents realize that a higher score doesn't just open one more door — it changes the entire set of options on the table. We're there for all of it.

Once the scores are in, we help with college essays. We're not done when the test is done — we're done when your child is accepted into the schools they want with the scholarships they deserve.

We understand most families plan to take the SAT once, and we will absolutely support you in getting the highest possible score between now and your next test day. But if your child decides to keep going — push for an even higher score, try a super score approach, or take another shot — you don't need to buy a new package or re-enroll. Your membership just continues, with the same tutor, the same study plan, and all your progress intact.

Compare that to a generic prep course: they cover the content at a high level, the course ends on a fixed date, and you're on your own regardless of what you score or whether you get accepted. We don't work that way. Our goal is to get your child the highest score possible, get them into the best schools they can, and help them land as much scholarship money as they can.

Cancel Anytime

If you use us for one month, get the score you need, and don't want help with anything else — you can cancel. That's it. No long-term commitments, no penalties, no runaround.

But most families find that once they see the progress, they want to keep going — push for a higher score, take the test again, or transition into college essay support. We're here for as long as you need us, and we're gone the moment you don't.

We just want to make sure that when you're ready to stop, it's because you got everything you came for — and more.
